

Lidl Stores Felixstowe, Suffolk & Skegness, Lincolnshire

Products Installed:

50mm Motorised Venetian blinds with aluminium finish with radio controlled operation and linked to an external light sensor.

Project Details:

These stores were experiencing excessive glare at the till areas and also significant heat gain through the full height glazing.

Nantmor Blinds proposed an automatic solution using heavy duty Venetian blinds linked to an external light sensor to operate the blinds only when a set light limit was exceeded. This also ensured the blinds automatically opened again when light levels reached acceptable limits. Nantmor also provided a radio controlled override option for store management.
